INSUFFICIENT SIDE CLEARANCE ADJUSTMENT

STEP 1 Top Adjustment
Remove and discard shipping screws (if used).
Loosen star washer screws and re-center pivot.
Tighten, check and repeat if necessary.

STEP 2 Bottom Adjustment
Rotate door to expose screws on bottom bracket.
Remove and discard shipping screws (if used).
Loosen star washer screws to re-center pivot cam base (both sides).
Tighten, check and repeat if necessary.

UNEVEN OR INCOMPLETE DOOR CLOSING ADJUSTMENT

(To center doors correctly in frame for proper clearance)

STEP 1
Loosen clamp screw in white plastic housing (approx. 1 turn) to prepare for positioning adjustment.

STEP 2
Rotate door counter-clockwise until white plastic housing has been latched into position with spring.
A resistance to turning will be felt when the housing reaches the latched position and may be accompanied by a click or latching sound.

STEP 3
Rotate door slowly clockwise to exact front centered position but not past it. Release door to check alignment. You may need to rotate door a little past center to allow for slight spring-back. If you rotate too far, go back to step 2 and repeat.

STEP 4
SLOWLY rotate door counter-clockwise far enough so that clamp screw faces you again. Tighten clamp screw securely, being careful not to rotate white plastic housing out of position.

TOP/BOTTOM CLEARANCE ADJUSTMENT

STEP 1
Remove polymer retainer clip.

STEP 2
Turn adjustment wheel (located inside cut-out portion of shaft) clockwise to raise shelf/unit. One full turn raises door 1/32". After adjustment, be sure to replace retainer clip.

NOTE: If shelves are heavily loaded, lift lower shelf slightly to aid adjustment. Total adjustment 1/2".

NOTE: When adjustments are completed, be sure to securely tighten all adjustment screws in housing, shaft bushing and tray adjustment screws.

Tools required for adjustments:
Phillips Screwdriver
